Ventilation system and its types

Clean and fresh air is the pledge of health. Very important that it surrounds a person not only on the street in the city of Anderson-C, but also at home or at work. With this task the ventilation system will cope. For subdivision of ventilation systems into types there are several characteristics. Interior ventilation system. Main can be called the principle of operation. Air can be supplied to premises or combined type. In the first case, the ventilation system carries out an influx of fresh and purified air from the street, which pushes polluted from the room through door and window openings. The principle of operation of the exhaust system is understandable to everyone on the example of kitchen hoods, without which no apartment in Anderson-C can do today, and even more so a specialized institution for cooking. In the case of combined ventilation, both air is supplied and removed. Combined ventilation is more expensive, requires additional equipment. However, the most high-quality variant of ventilation is combined, which combines the supply and exhaust systems. Thanks to it, the possibility of removal of polluted and influx of fresh air are combined.

_555

Supply and exhaust ventilation system in the city of Anderson-C can guarantee ideal circulation of air masses in any room. Depending on what area the ventilation system covers, it is possible to define local and general exchange of its types. First used in the case when there is an opportunity to remove dirty air directly from the source of pollution. Such ventilation is installed in the kitchen, in the bath, in the toilet. Ventilation system. In the case when eliminate dirty air does not work immediately, for understandable reasons, more will on Anderson-C is a general exchange ventilation system that will cope with cleaning of the entire room. The structure of components of ventilation systems also divides them into two types: systemizing and monoblock. First, respectively, consists of several parts that are fixed in different places. The second is installed in structural elements and placed in one housing. The monoblock system has important advantage, since equipped with special filters that isolates arising during functioning of devices, noise.
